Partnering with the extraordinary

Who we are

Airspace Technologies is a provider of time-sensitive, technology-enabled logistics intended to eliminate the transparency issues and challenges facing organisations today. From shipping transplant organs to hard aircraft parts that can cause delays across the nation, we focus on providing time-critical, on-demand shipments. Our company key features include automatic quoting, routing, and tracking across a global courier network through next flight out, hand carry, international shipping, provision for dangerous goods, and charter services. These features enable customers to get their goods delivered as fast as possible without any hassle.

Our advantage

The Airspace platform provides customers with direct visibility to the driver throughout the entire delivery process while providing stakeholders with notifications based on location, status, and ETA. Because Airspace works directly with independent contractor drivers, they are paid premium rates and in turn provide a best in class experience on every shipment.

Key benefits are:

Faster order entry

1 minute to route and quote nationwide deliveries with 1 click order placement

Automatic dispatch

Dispatch experienced, compliant drivers nationwide in less than 2 minutes

Track your shipment

Track your shipment down to a 3-foot radius throughout the delivery process

How does our solution work?

At Airspace Technologies, we've changed how logistics works. Airspace streamlined the transportation process by adding technology to an antiquated industry. We provide shippers direct access to experienced, compliant drivers creating a transparent marketplace for real-time, critical shipping. Through an Uber-like app shippers can search for and book exact quotes in real-time, sorting by speed or cost. Shipping routes include facility-to-airport, airport-to-airport, and airport-to-destination segments, with ground transportation provided by Airspace drivers (Commanders) or external agencies (Agents) when Commanders are unavailable. Air transportation is provided by partner airlines seeking to fill their cargo bay in the belly of their aircraft.

What are people saying?

I had a shipment for a medical unit that was super urgent. Airspace picked up, and (were) delivering within 30 minutes!! Excellent service!

- Airspace customer
