Partnering with the extraordinary

# NGINX

## Who we are

Powering half of the world’s busiest sites, NGINX is the heart of the modern web. NGINX helps you deploy and deliver your sites and apps with performance, reliability, security and scale.

NGINX does this by providing a complete application delivery platform – NGINX Plus – that combines load balancing, content caching, web serving, security controls and monitoring in one easy-to-use software package.

NGINX ensures maximum performance and improved delivery for almost any application (whether a legacy application, traditional web app, or interconnected microservices) and equally for all types of infrastructure (bare metal, the cloud or in containers).

## Our advantage

Reduce total cost of ownership – NGINX Plus running on industry standard hardware outperforms Application Delivery Controllers (ADCs) with significant cost savings.

Eliminate vendor lock-in – NGINX Plus software works in any environment, public or private, allowing for maximum flexibility and independence from infrastructure.

Deploy in seconds instead of days – NGINX Plus is fully automatable using standard Linux tools familiar to DevOps teams.

## Our partnership

Telstra’s Cloud Engineering teams will be using NGINX as they move towards more agile and flexible methods of application deployment. Being able to use a virtual based load balancer for application support will enable Telstra to easily build out apps that scale automatically and provide greater resilience.

## How does our solution work?

Plus: All-in-one load balancer, content cache, and web server.

Unit: application server Inc.Open source, multi-language, and REST API-driven configuration.

Amplify: Cloud hosted Lightweight monitoring and static analysis for NGINX and NGINX Plus.

Controller: Manage load balancers, API gateways and service mesh deployments at scale on multi-cloud from a single pane of glass.

Web Application Firewall: Stop SQL injection, LFI, RFI, Layer 7 attacks.

## What are people saying?

“We had an expensive upgrade coming with our current load balancing provider. We found that we could do more with NGINX Plus at a quarter of the cost .”

- Discovery Education

“NGINX support had it figured out quickly and tailored to our environment. It worked like a champ. We worked with expert engineers who helped in no time.”

- State of Montana
