Partnering with the extraordinary

# NS1.

## Who we are

OpenGov is the leader in government performance management technology for the public sector, with an easy-to-use, modern Cloud ERP software that features robust solutions for budgeting and planning, permitting, licensing, and code enforcement, financials, reporting and transparency. It provides an end-to-end financials suite, full-featured budgeting & planning suite and best-in-class resident services.

It is suitable for government agencies of all sizes; local and state (including local, cities, counties, special districts, states, and schools) as well as federal level to streamline budget-building processes; track your progress; and powerful engagement with your customer by sharing information and collecting their feedback.

## Our advantage

The OpenGov ERP Cloud is the only fully integrated web-based ERP system purpose-built for our nation's cities, counties, and state agencies which drives efficiency and visibility across your local government

### Key benefits are:

- Modern, easy-to-use cloud software enabling quick implementation with minimal IT support.
- Rapid innovation cycles are reflected in monthly automatic upgrades to the latest version of OpenGov
- Time savings as customers can spend up to 50% less time on the budget process and 80% less time on reporting
- Better value as 1% or more of budget can be freed up for re-allocation to other priorities
- Government-grade security with industry leading uptime.

## How does our solution work?

Through a single cloud platform, you can go from source business documents to accounting, reporting, forecasting, budgeting, and resident services without duplication of work, data translation, or other barriers to slow progress.

You can then leverage these insights to make data-driven decisions, provide context, improve resident satisfaction, and share results internally and externally.

OpenGov is offered in a Software as a Service (SaaS) model, where you pay for the solution based on the total budget size of the government organisation. There are no per user charges so once the solution is purchased it can be deployed broadly at no additional fee.

## What are people saying?

"(OpenGov) is flexible, it's scalable, it's interoperable, and that provides us with a platform to make the most useful as possible."

- Michael Valle, California Health Planning and Development.

"50% time savings have freed my staff up from drudgery, enabling them to focus on things to help move this city forward!"

- Ben White, City Manager, Farmersville, TX
