Partnering with the extraordinary

Who we are

Zimperium, is a global leader in mobile device and app security, offering the only real-time, on-device, machine learning-based protection against Android, iOS and Chromebooks threats.

Powered by z9, Zimperium protects your devices and apps against known and unknown mobile cyberattacks, helping you to boost mobile productivity, while safeguarding employee and customer data.

Zimperium's disruptive, on-device detection engine uses patented, machine learning algorithms to protect against the broadest array of mobile attacks.

We also help organisations to assess the security and privacy risks of installed apps, as Zimperium provides an advanced app analysis scanning engine which resides in the cloud

Our advantage

Zimperium's z9 is the only on-device, machine learning-based security engine that has stopped every known and zero-day threat in the wild without an update.

Key benefits include:

- Detects both known and unknown threats
- Detects and prevents network and host-based attacks, malware and malicious apps
- Saves time and enhances productivity with early detection and protection of your corporate or BYOD devices
- Very easy to scale in line with your evolving business requirements
- SaaS model makes it easy to deploy with a faster ROI
- Does both on-device and offline detection
- Minimal device impact (does not drain the battery of the device)
- Protects user privacy

Our partnership

As attacks are seemingly coming from all angles and businesses are being breached at an increasing pace. Traditional signature-based defenses can't hold up to the new breed of attacks and with the increasing use of mobile, there needs to be a huge shift in how companies think about security.

The Zimperium platform provides an enterprise-grade mobile security offering which is leveraged by Telstra and its channel.

How does our solution work?

Our solutions include zIPS which runs locally on any mobile device and detects cyberattacks without a connection to the cloud and our first-of-its-kind Mobile Application Protection Suite (MAPS), a comprehensive solution that helps organisations protect their mobile apps throughout their entire life cycle.

MAPS is comprised of three solutions: zScan, which helps organisations discover and fix compliance, privacy, and security issues; zShield, which hardens the app through obfuscation and anti-tampering; and zDefend (formerly zIAP), an SDK embedded in apps to help detect and defend against device, network, phishing and malicious app attacks while the app is in use.

What are people saying?

Zimperium won a number of awards at Infosec 2020 including : Most Innovative Enterprise Mobile Threat Defence, Best Product Mobile Endpoint Security and Best Product Artificial Intelligence And Machine Learning

Zimperium was awarded the Gold Winner in Mobile Threat Defence

- zPlatform at the Cybersecurity Excellence Awards 2020
